20+	\$12	20+	\$16	LARGE print over A3	
				Add \$7.50	

GST NOT INCLUDED

1/ Prints up to 210 mm x 300 mm . Images over this size attract an extra \$5 surcharge.

Maximum print size is 420 mm x 550 mm

2/ Digital is only for 100% cotton garments.

Heavier weight cotton can require double pretreat and longer curing times. A surcharge may apply

3/ You can expect a 5-10% fade on all garments as the printed fibres wash away.

Bright shirt colours eg orange, red and fluoro have a dye compound that prevents adhesion of white ink. These cannot be printed without washing first.

4/ Always check your artwork before sending it to us. The image must be at final print size.

Low resolution (72 dpi) images cannot be printed with any colour accuracy.

Simply increasing the resolution of a low quality image in Photoshop will not improve the image.

Hi resolution pdf files are the best way to email images. 200 dpi is sufficient.

5/ For printing dark shirts . Where the image is not on a separate layer, there will be an artwork fee to remove the background. Otherwise the printer doesn't know where to print the white ink.

6/ As this is a CMYK process, Pantone colour matching is not available. Convert all RGB images to CMYK to get an accurate preview.

The main advantage of this process is for small quantities with lots of colours in the image.

Compared to screenprinting where there are a lot of setup costs , it will be more cost effective to print digitally up to 50 shirts (depending on the no. of colours in the image and the type & size of image)

VINYL TRANSFERS

Where the image is a one colour text or special finish (glitter , reflective or metallic) we will use transfer vinyls. These are completely fade resistant and compatible with all fabric types.

Price as per white shirts . Where complex shapes and large areas are involved, a surcharge may apply.
